

Candidate Information

Position: Research Assistant

School/Department: School of Mechanical and Aerospace Engineering

Reference: 25/112946

Closing Date: Monday 3 November 2025

Salary: £35,136 per annum

Anticipated Interview Date: Friday 14 November 2025

Duration: 7 months

JOB PURPOSE:

To support the research of the Queen's University Belfast and MBDA collaborative research team, investigating the procedural & methodological readiness of modelling & simulation functions for the process of certification by analysis (CBA). The work relates to the structural and functional performance of complex systems.

Successful applicants will have responsibilities in process review & documentation, independent research, collaborating with the QUB team, and outreach. Direct collaboration with MBDA will be a key aspect of the role, including regular meetings with engineers from the company.

MAJOR DUTIES:

- 1. Understand the role of modelling and simulation in the development of complex systems.
- 2. Understand the requirements of model assurance.
- 3. Assist in the review & documentation of current procedural and methodological approaches to complex system development.
- 4. Assist in the implementation of an established HVM Catapult CBA assessment framework in order to understand / quantify levels of readiness for certification by analysis.
- 5. Produce high quality research outputs in oral and written format.
- 6. Produce high quality research outputs consistent with project aims and commensurate with career stage. This will include collaborating and co-authoring with the wider project team (as appropriate) on outputs.
- 7. In consultation with the project team, promote research milestones and outputs at national and international conferences.
- 8. Assist grant holder in the preparation of funding proposals and applications to external bodies.
- 9. Carry out occasional educational supervision, demonstrating or lecturing duties within the post holder's area of expertise and under the direct guidance of a member of academic staff.
- 10. Undertake supplementary duties relevant to the success of the project including administrative duties and additional training and development activities as required.

ESSENTIAL CRITERIA:

- 1. Have or about to obtain a degree in Mechanical or aerospace engineering, or related science (expectation 2.1 or higher)
- 2. Recent relevant experience to include:
 - Knowledge of using relevant techniques to carry out analyses, critical evaluations, and interpretations of data as relevant to the research project.
 - Demonstrable experience the critical evaluation of scientific documentation and processes related to modelling & simulation.
 - Demonstrable experience in technical writing.
 - Design and operation of complex systems (E.g. UAS).
- 3. Willingness to undertake additional training in research methods and other related skills as required.
- 4. Practical problem-solving skills, independence of thought and initiative.
- 5. Ability to communicate complex information effectively in oral and written format.
- 6. Ability to build relationships to develop internal and external networks.
- 7. Ability to assess and organise resources.

8. Willingness to travel to meet the requirements of the research project.

DESIRABLE CRITERIA:

- 1. Working towards a PhD in the area of Computational Simulation.
- 2. Demonstrating experience of working on the certification of products.
- 3. Demonstrable experience in the use of software for the autonomous operation of unmanned systems.
- 4. Demonstrable experience of computational simulation in an industrial setting.
- 5. Demonstrable experience of physical experimentation in an industrial setting.
- 6. A publication record which is commensurate with career stage and experience.
